

# Weekly Meetings Report

27 February 2015

## Discussed Topics

1. *Algorithm Implementation*

As suggested by Prof. Li last week, the authors of the BM3D paper were contacted. With the reply being insightful for the Wiener Filtering part, it was possible to finish the algorithm implementation, with results as expected.

## Next tasks

1. *System Architecture*

For next week the plan is to start thinking about the top level system architecture, particularly the DCT implementation, which is expected to be the most hardware expensive block of the system.
