THE ORGANISERS

INTERNATIONAL COUNCIL FOR BUILDING RESEARCH STUDIES AND DOCUMENTATION (CIB)

The International Council for Building Research Studies and Documentation (CIB) is an international non-profit organization formed to encourage an international collaborative effort to attain more effective programs of research, information exchange and development in the fields of building, including economic and social aspects. In carrying out its objectives, the CIB:

- Seek to develop international cooperation between all types of governmental, academic and industrial research organizations.
- Encourages the exchange of researchers between organizations in different countries.
- Seeks practical methods for cooperative planning of research to reduce duplication of work and to achieve planned assessments of different approaches to similar problems.
- Promotes exchanges of building and construction information and research documents.
- Strives for international recognition of the importance of the building industry and of the research effort required to keep it viable.
- Sponsors international symposiums on timely subjects.

CIB Membership consists of public and private research organizations, professional associations, industries and enterprises as well as individual experts. Members of CIB are found in 50 countries.

Additional information on CIB may be obtained from:

SECÇÃO DE CONSTRUÇÕES CIVIS / FEUP

The Division of Civil Constructions (SCC) is a branch of the Department of Civil Engineering of the Faculty of Engineering of the University of Porto. Its staff is responsible of several disciplines in the Civil Engineering Degree from the 1st to the 5th and last year of the Course; the themes comprehend, among others, Technical Design and Drafting, CAD, Building Construction, Physics of Buildings and Planning and Management of Construction.

Following an ever increasing interest in non-structural aspects of building, the SCC is currently responsible for a biannual MSc Degree on Building Construction in parallel with Post-Graduate Courses aimed at both Architects and Engineers. At the same time, it organizes several scientific reunions about specific themes and courses concerning the introduction of new National or European codes.

Additional information about the SCC can be obtained from:

SPONSORS

The Organising Committee wishes to present here its gratitude to the following sponsors whose support was decisive for the organisation of this Symposium.

CMP - Câmara Municipal do Porto

JNICT - Junta Nacional de Investigação Científica e Tecnológica

INH - Instituto Nacional de Habitação

SMAS - Serviços Municipalizados de Águas e Saneamento do Porto

CRT - Comissão Regional de Turismo

Bombas GRUNDFOS Portugal, Lda.

TERMOPLAS / ECOPLAS

SALMSON POMPES Portugal

WIRSBO Tubos da Suécia, Lda. Portugal

FOREWORD

It is my pleasure and honour to welcome you in Porto for the 1993 CIB/W62 INTERNATIONAL SYMPOSIUM ON WATER SUPPLY AND DRAINAGE FOR BUILDINGS.

The purpose of this meeting is to establish the best practice and research knowledge in the main themes issued for the symposium.

The concept of modern building is changing every day and the water cycle in a building deals more and more an important role of development and modernisation. The way we deal with water is today a pattern of quality we can no longer ignore.

Every year new developments in this field influence the way we look to buildings. I sincerely hope that the Porto meeting will contribute to disseminate those new ideas and encourage a fruitful discussion on new concerns.

A handwritten signature in black ink, appearing to read 'Vitor Abrantes', with a long horizontal flourish extending to the left.

Vitor Abrantes - Chairman
