

Quality Assessment in Iris Recognition for Mobile Applications – Progress Report

May 2, 2014

WEEK:

28-04-2014 to 02-05-2014

MEETINGS:

With the co-supervisor, on Tuesday.

With the supervisor and the co-supervisor, on Wednesday.

ACCOMPLISHMENTS:

In the meeting with the supervisor some other tests were suggested by him in order to address the problem found in the last weeks.

It was also discussed the possibility of changing the direction of the thesis a bit by staying with the “liveness detection” topic, but studying also methods for fingerprint liveness detection. This decision is still up for further discussion.

PROBLEMS:

We still don't know how to fix the high error rate problem.
