

Quality Assessment in Iris Recognition for Mobile Applications – Progress Report

March 7, 2014

WEEK:

3-03-2014 to 7-03-2014

MEETINGS:

With the co-supervisor, on Tuesday.

ACCOMPLISHMENTS:

The implementation of the first method started. The method is based in weighted local binary patterns. The goal was to finish the implementation by the end of the week, so that the features could be extracted thereafter.

PROBLEMS:

We had some issues during the implementation of the method due to the misunderstanding of some parts of the article. This problem lead to a delay in the work plan.
