

Quality Assessment in Iris Recognition for Mobile Applications – Progress Report

April 11, 2014

WEEK:

7-04-2014 to 11-04-2014

MEETINGS:

With the co-supervisor, on Tuesday.

ACCOMPLISHMENTS:

We were able to get the classification results for the second database, Notre Dame. We also got high error rate results for this database which leads us to think that something might be wrong with the code.

We will revise the code to see if we can fix some bug.

Meanwhile, the second method proposed is also being developed.

PROBLEMS:

The results we got with the classification were higher than expected. We will have to try to lower them.
