

5th Meeting

Place: INESC Porto

Date: 25/03/2014

Time: around 16:00

Participants:

Student: Ana Carolina Janeiro

Co-supervisor: Maria Teresa Bianchi de Aguiar

Discussion:

Discuss the implementation of the solution decoder (the program wasn't able to allocate all the products in shelves) and the integration of the BRKGA solution with the already implemented software for planogram generation.

Decisions:

- Different solutions will be tested to solve the problems found with the solution decoder, namely:
 - changing the stopping criteria, to see if it eventually allocates all products;
 - trying to remove target facings;
 - see if different chromosomes often decode the same solution.
- The classes to be created in order to integrate the BRKGA solution with the planogram generation software were decided.
